### 3 Penetrance Estimates

#### 3.1 Max/Min Penetrance as a Function of $P(D)$ and $P(V|D)$

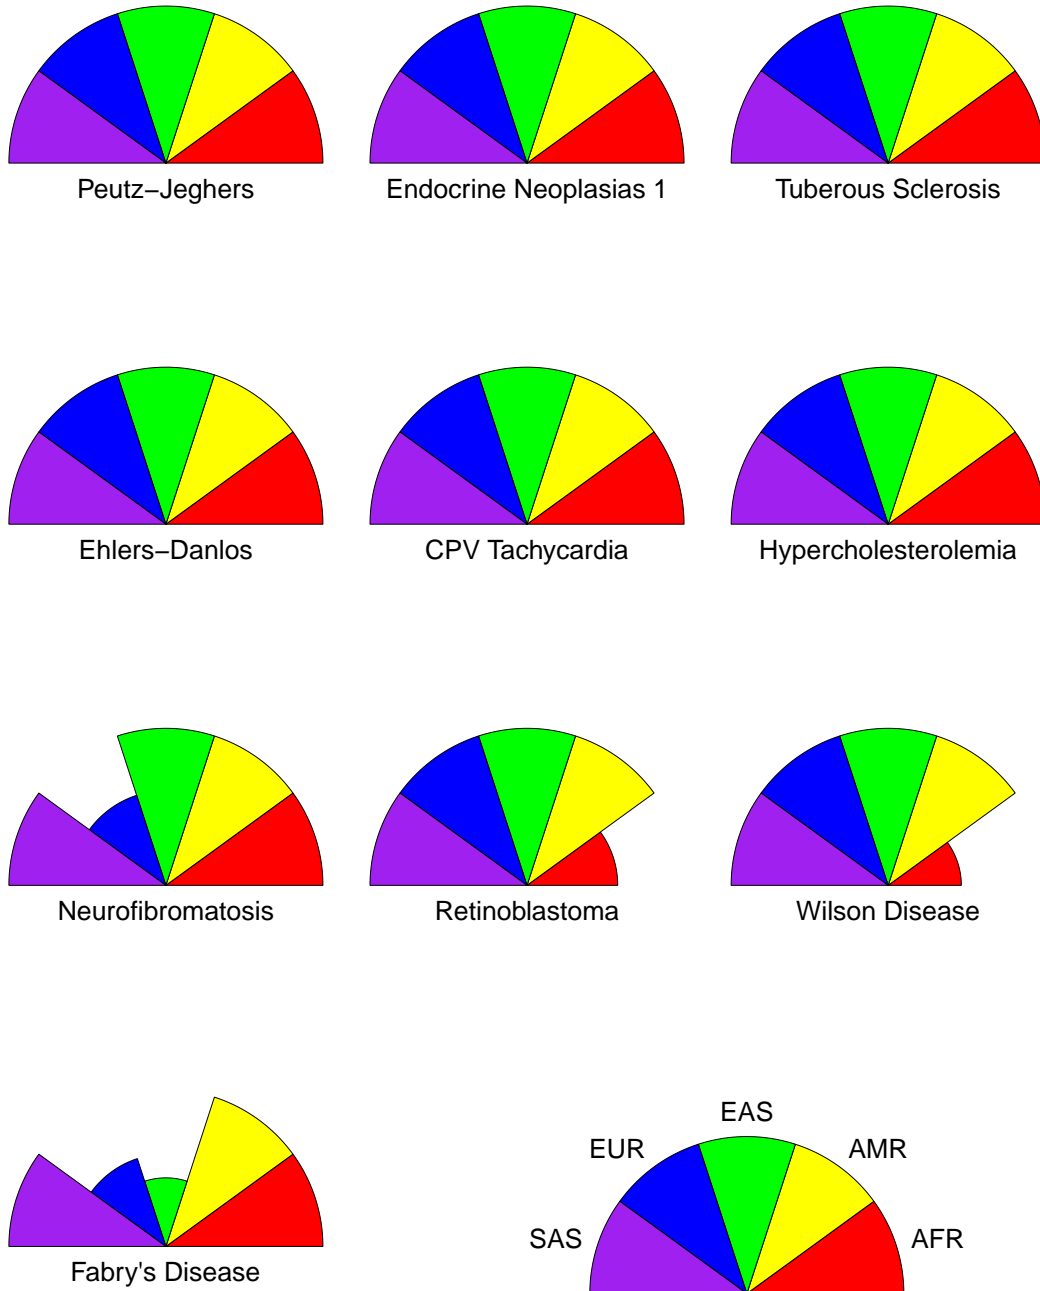

The left end of the boxplot indicates  $P(V|D) = 0.01$ ,  
the bold line in the middle indicates  $P(V|D) = \text{point value}$ ,  
the right end of the boxplot indicates  $P(V|D) = 1$ .

Note: Some diseases have mean theoretical penetrance = 1 because the assumed allelic heterogeneity is greater than is possible, given the observed prevalence and allele frequencies.

### 3.2 Penetrance Estimates by Ancestry

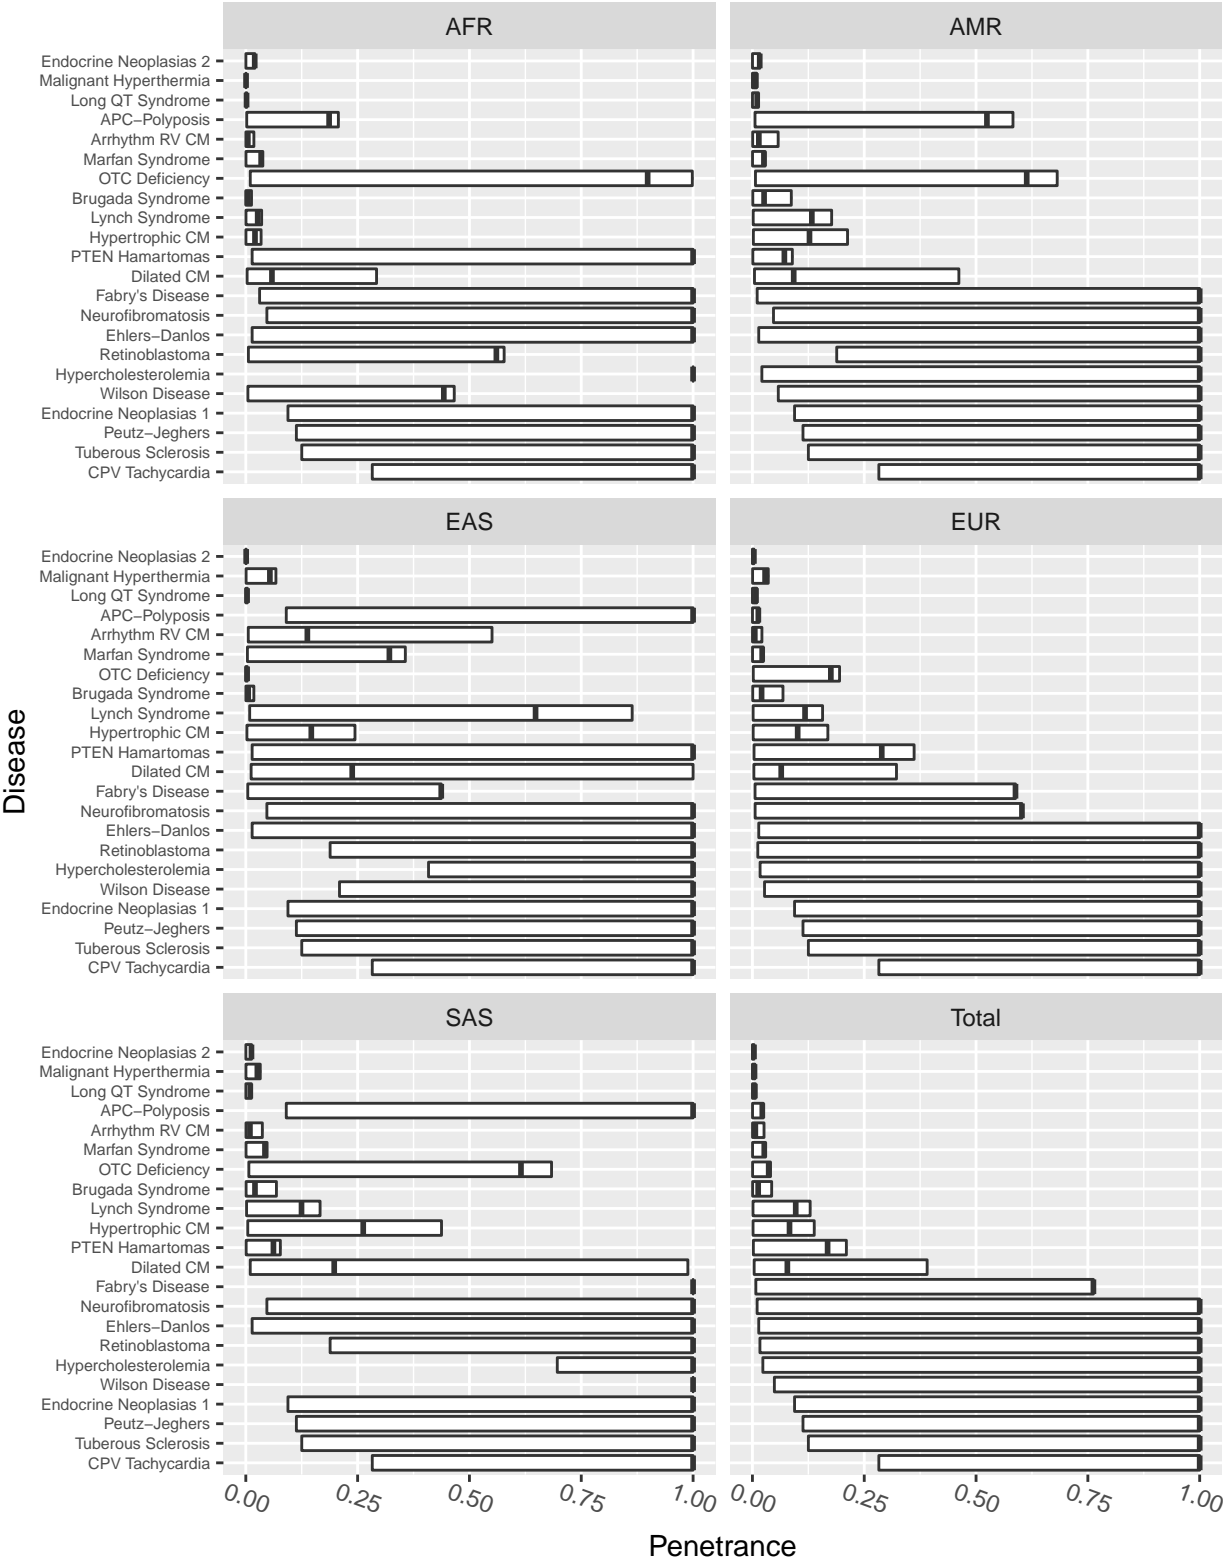

#### Radar Plot: Max Penetrance by Ancestry (gnomAD)

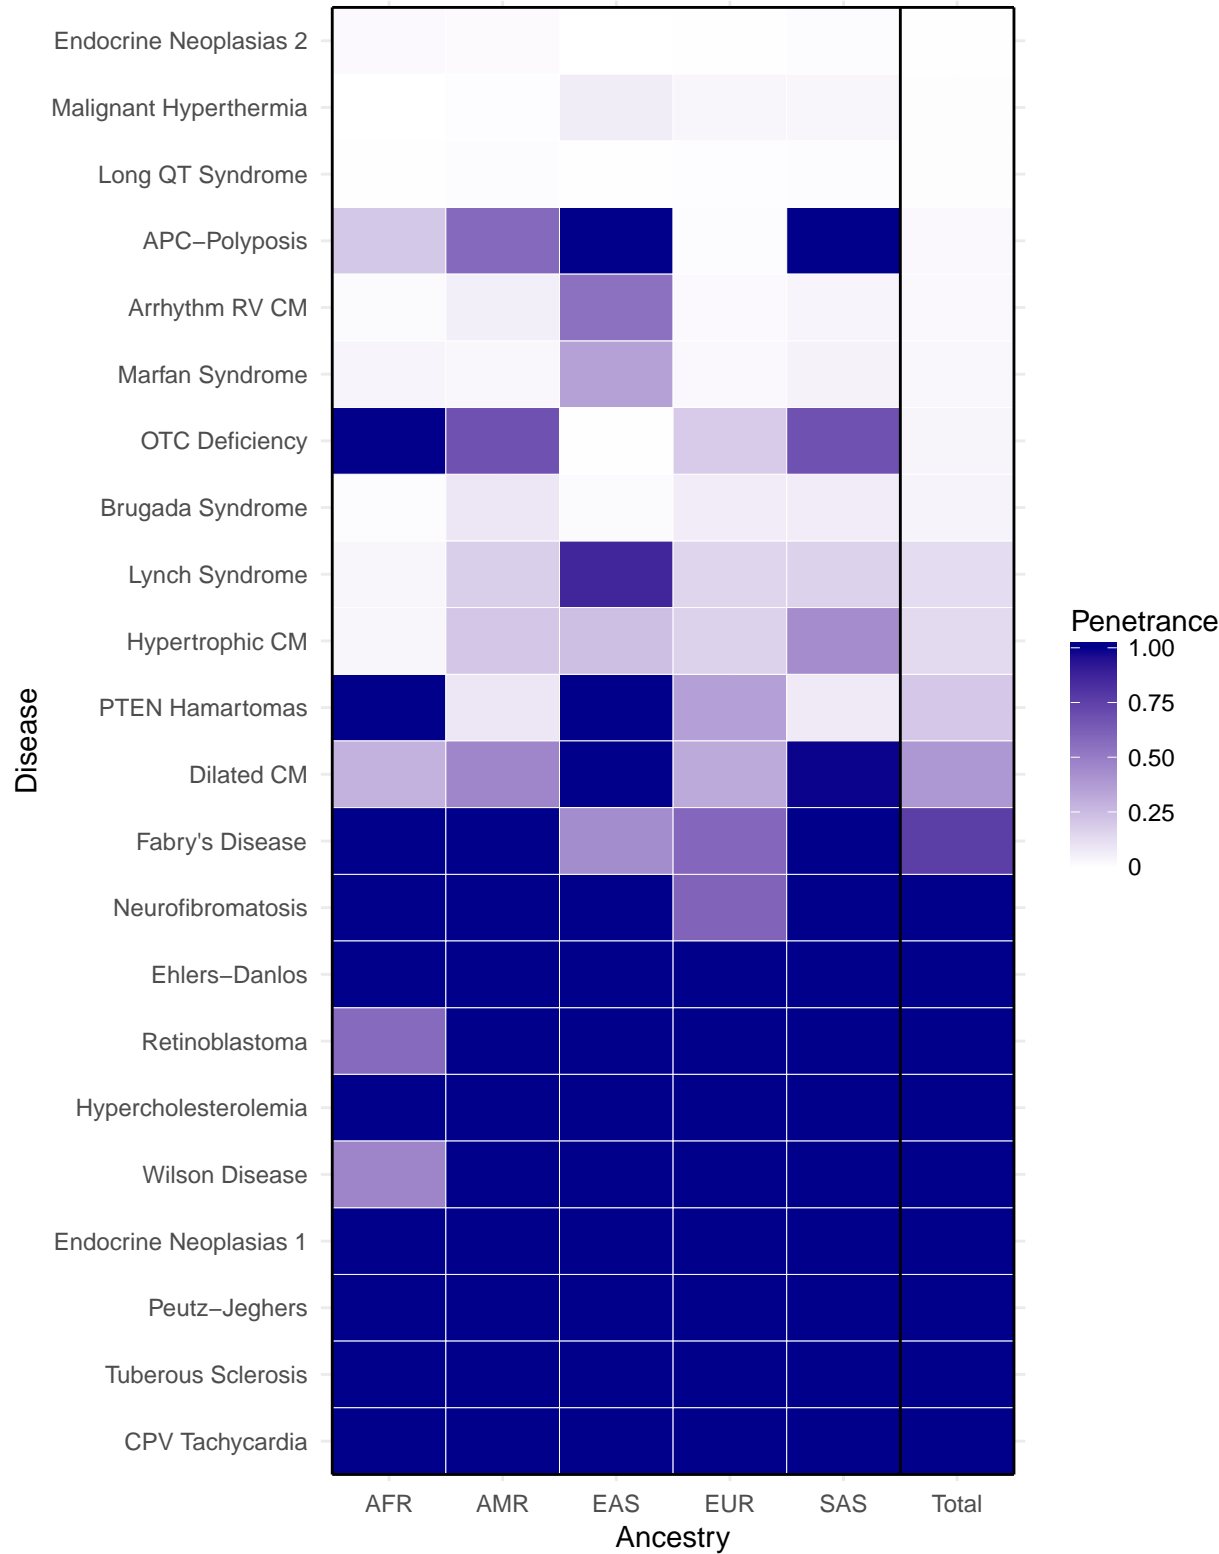

## [1] These are the top 10 diseases by summed allele frequencies. NULL values are not plotted.

## [1] Each radius is proportional to the penetrance of the disease in the given population.

Barplot: Penetrance by Ancestry (gnomAD)

Heatmap: Max Penetrance by Ancestry (gnomAD)

## Dark gray boxes are NA: no associated variants discovered in that ancestral population.
