### 2 Summary Statistics

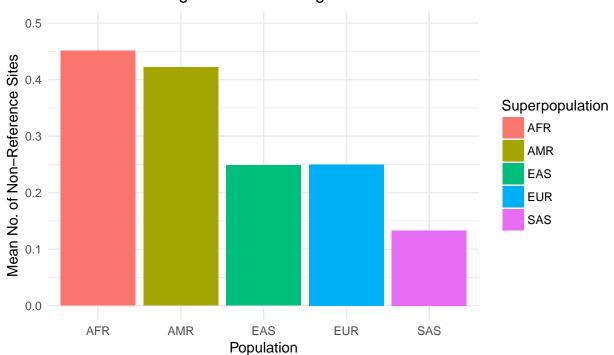

### 2.1 Fraction of Individuals with Pathogenic Non-Reference Sites

Population

### ACMG-59 Pathogenic: Fraction in gnomAD

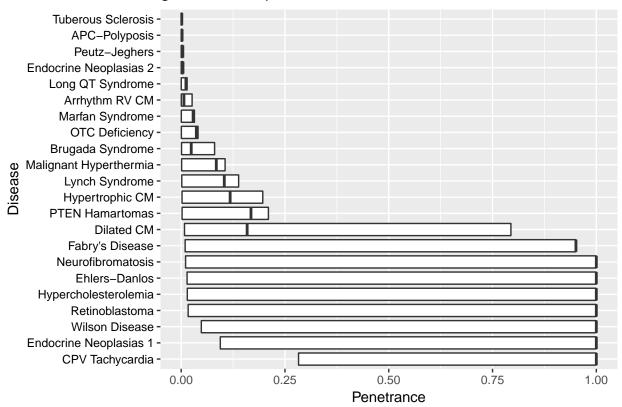

#### 3 Penetrance Estimates

### 3.1 Max/Min Penetrance as a Function of P(D) and P(V|D)

The left end of the boxplot indicates P(V|D) = 0.01, the bold line in the middle indicates P(V|D) = point value, the right end of the boxplot indicates P(V|D) = 1.

gnomAD: Barplot of Min/Point/Max Penetrance

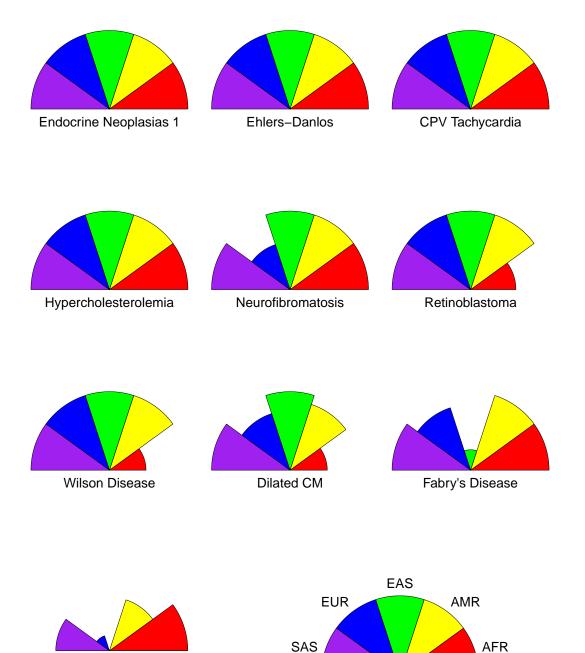

Note: Some diseases have mean theoretical penetrance = 1 because the assumed allelic heterogeneity is greater than is possible, given the observed prevalence and allele frequencies.

### 3.2 Penetrance Estimates by Ancestry

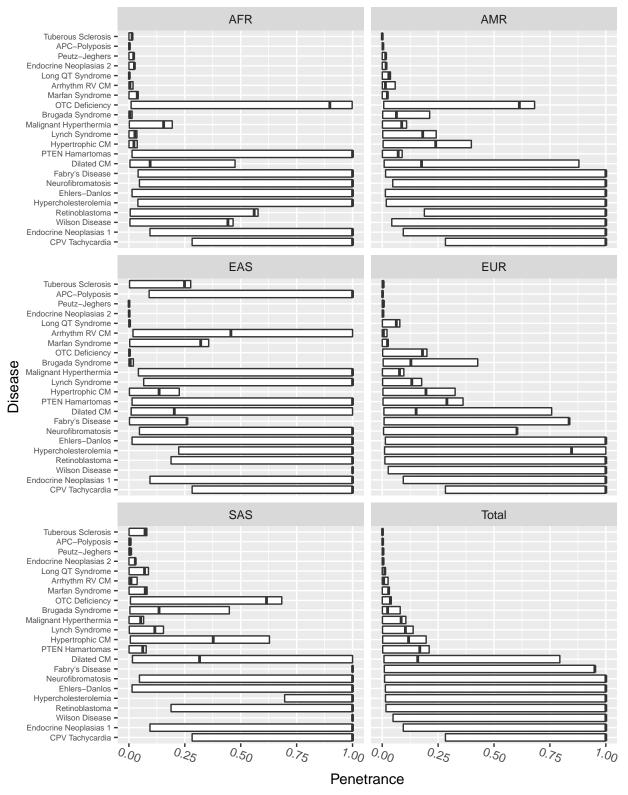

**OTC** Deficiency

# Radar Plot: Max Penetrance by Ancestry (gnomAD)

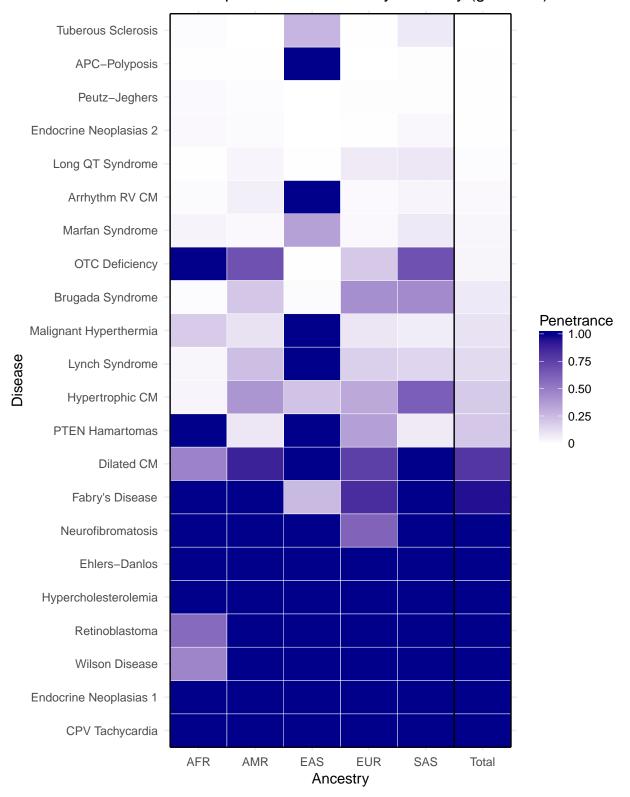

- ## [1] These are the top 10 diseases by summed allele frequencies. NULL values are not plotted.
- ## [1] Each radius is proportional to the penetrance of the disease in the given population.

## Barplot: Penetrance by Ancestry (gnomAD)

### Heatmap: Max Penetrance by Ancestry (gnomAD)

## Dark gray boxes are NA: no associated variants discovered in that ancestral population.
