### 3 Penetrance Estimates

### 3.1 Max/Min Penetrance as a Function of P(D) and P(V|D)

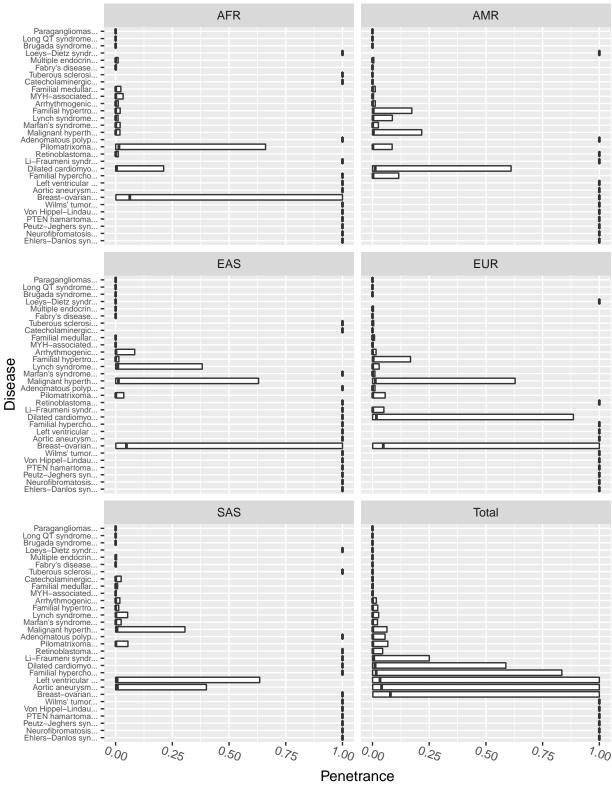

The left end of the boxplot indicates P(D) AND P(V|D) = lower value, the bold line in the middle indicates P(D) AND P(V|D) = geometric\_mean(values), the right end of the boxplot indicates P(D) AND P(V|D) = upper value.

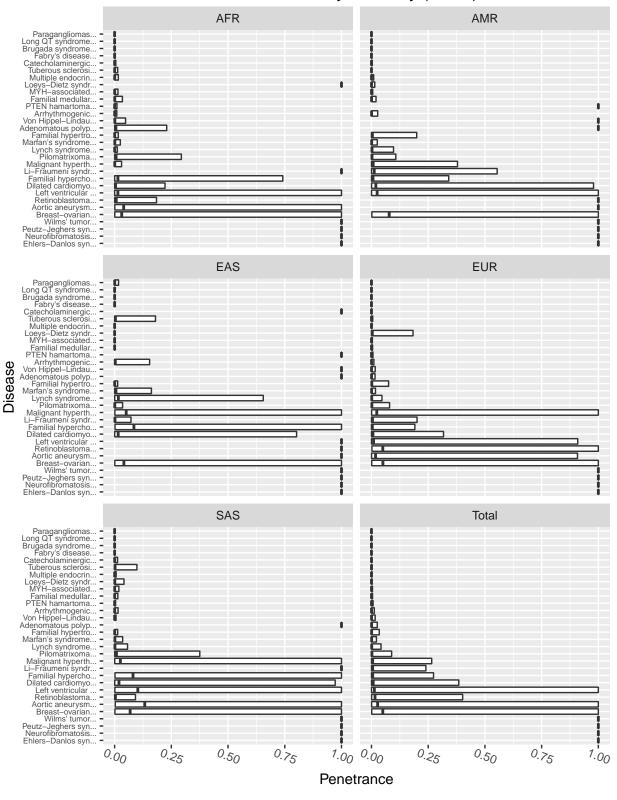

Note: Prevalence ranges of 5x were assumed for all point estimates of prevalence. For example: a point estimate of 0.022 would be given the range 0.01-0.05.

#### 3.2 Penetrance Estimates by Ancestry

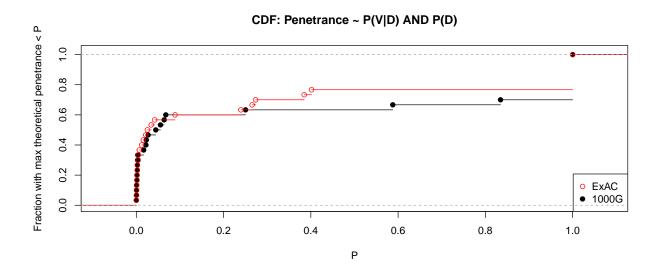

## Penetrance by Ancestry (ExAC)

### 3.3 Empirical CDFs for All Penetrance Plots

### 3.4 Comparing Mean Penetrance between ExAC and 1000 Genomes

#### Penetrance Means: ExAC v. 1000 Genomes Breast-ovarian... Aortic aneurysm... Retinoblastoma... Left ventricular ... Dilated cardiomyo... 1e-02 -Malignant hyperth. Li-Fraumeni syndr... Familial hypercho... Pilomatrixoma... Penetrance\_ExAC Lynch syndrome Marfan's syndrome... Familial hypertro... Adenomatous polyp... Arrhythmogenic.. Familial medullar... 1e-04 Multiple endocrin... The Pearson correlation is 0.95. Max penetrance values computed using 1000 Genomes are 1.5-fold larger than those computed using ExAC.
